

Huck Magna-Tite®

All-Aluminum Fastener Ideal for Thin or Low-Strength Materials

The Huck Magna-Tite® is a specialized aluminum structural rivet fastener well-suited for use within oversized holes and repair applications.

During installation, Magna-Tite clamps the joint with a broad blind-side bulb, making it ideal for installation in thin materials such as aluminum, fiberglass and plastic. Unlike other bulbing blind fasteners, the Magna-Tite has a unique embedded sealant applied between the pin and the sleeve. This sealant oozes into the joint during installation, completely filling any gap, and ensuring water resistance.

Secure, Fast Installation

Large blind-side footprint for installation in thin or compressible materials where controlled strength is required.

Unique embedded sealant applied between the pin and sleeve

Advanced Huck® Tooling

Huck offers a choice of hydraulic installation tools designed for the the Magna-Tite. Supporting these tools is Huck's Powerig® 940, a portable hydraulic power source for moderate production and repair applications.

Installation Tools – Weight and Dimensions
